

Pack of 10 - IDPrime 931 card - HID iClass & Prox

IDPrime 931 is the name for a hybrid card from Thales (formerly Gemalto) that includes the IDPrime 930 chip together with another technology, in this case both HID Prox and HID iClass. It is a plug & play PKI smartcard that provides the necessary security services to implement a strong two-factor logical access and security infrastructure on Windows and other platforms. The IDPrime 930 is a contact interface smart card that supports the ISO 7816 standard, and is Common Criteria EAL6+ certified. This smartcard is FIPS 140-2 Level 2 compliant, a natural replacement for the Gemalto ID Prime MD 830 L2 or L3, with enhanced cryptographic support (including RSA up to 4096 bits and elliptic curve algorithms).

Fully compliant with the latest Microsoft minidriver specifications for use on Windows, without the need for additional middleware, the necessary driver will install automatically and for free, using plug-and-play.

This version includes a built-in low frequency HID Prox RFID chip, and a high frequency (13.56MHz) HID iClass 32k chip, providing a flexible combination that can be used for logical and physical access control and other RFID-based applications.

Plain white (HID-branded) card in packs of 10. Includes standard HID Prox and iClass programming - please specify the required format and number range in the special instructions box during the checkout process, or contact us to discuss the options available.

Equivalent to Thales (SafeNet) part number O1170975, with FIPS 140-2 Level 2 compliance.

Country of origin: France

HSF Code: 8523520000

PKI smartcard ideal for highly secure public-key based applications. Includes built-in contactless HID Prox and iClass 32k chips allowing for the addition of physical access control applications. Equivalent to Thales (SafeNet) part number O1170975. Pack of 10 cards.
