

Pack of 10 - IDPrime 931 card - HID Prox

IDPrime 931 is the name for a hybrid card that includes the IDPrime 930 chip from Thales (formerly Gemalto) together with another technology, in this case HID Prox. It is a plug & play PKI smartcard that provides the necessary security services to implement a strong two-factor logical access and security infrastructure on Windows and other platforms. The IDPrime 930 is a contact interface smart card that supports the ISO 7816 standard, and is Common Criteria EAL6+ certified. This smartcard is FIPS 140-2 Level 2 compliant, a natural replacement for the Gemalto ID Prime MD 830 L2 or L3, with enhanced cryptographic support (including RSA up to 4096 bits and elliptic curve algorithms).

Fully compliant with the latest Microsoft minidriver specifications for use on Windows, without the need for additional middleware, the necessary driver will install automatically and for free, using plug-and-play.

This version includes a built-in contactless HID Prox chip, providing a useful combination that can be used for logical and physical access control and other RFID-based applications.

Plain white card with small HID logo in packs of 10. Includes free HID Prox programming service - please specify the required format and number range in the special instructions box during the checkout process, or contact us to discuss the options available.

Gemalto is now part of Thales.

Country of origin: France

HSF Code: 8523520000

PKI smartcard ideal for highly secure public-key based applications. Includes a built-in contactless HID Prox chip giving the potential for the addition of physical access control applications. Pack of 10 cards.
