

Pack of 100 - iClass 2k/2 Card

The iClass 2k/2 card from HID is a 13.56 MHz contactless smartcard designed for use with HID's door access control systems plus other compatible applications. The card contains 256 bytes (2k bits) of memory and is configured with 2 application areas. The first area stores the HID card number and the other is customisable for user requirements.

The highly secure iClass card uses the ISO 15693 standard for contactless communications. With appropriate software, PC based readers such as the Omnikey 5321 can be used to read and write data on these cards.

Note: These cards are supplied un-programmed in packs of 100, although a **free** programming service is available if details are supplied at the time of order. To specify the format, facility code and number range enter your requirements into the '**special instructions**' box during the checkout process or contact us to discuss your options.

Plain white card with printed reference info.

HID part number 2000CGGNN
