STid SECard Secure encoder kit with Bluetooth

The SECard encoder kit provides a secure and easy-to-use software platform for creating, configuring and managing your own private smartcard-based door access card encoding format, based on the STid range of MIFARE/DESFire door access readers such as the ARC-A.

This kit (manufacturer part number KIT-SECARD-BT) includes a secure USB desktop reader and matching software for Windows, which enables administrators to create their own encrypted data format for card numbers stored on MIFARE Classic, DESFire EV1 and other RFID and Bluetooth card technologies. The encoding information can then be transferred to compatible STid readers through the use of programming cards, while the software also offers a quick and easy card encoding function for the creation of user cards.

Secure desktop reader and software solution for managing encryption keys, configuring readers and encoding RFID and Bluetooth user cards. Suitable for use with the complete range of STid door access readers.
