Container card and USB token reader for vSEC-S series

This PIV smartcard token is designed for use with the vSEC-S series card management system. This will, for instance, allow you to set up and issue a Windows smartcard logon certificate to a PIV credential.

The vSEC CMS from Versasec (previously Versatile Security) is a highly secure, cost effective, easy-to-integrate smartcard management system that supports the deployment and management of an organisation's smart cards throughout the entire lifecycle. This advanced smartcard management application features an intuitive user interface as well as fast installation and system integration.

To use these card token readers you will need to also purchase a license for the vSEC-S series card management system.

Operator PIV smartcard and USB token reader. Designed for use with the vSEC-S series card management system (licensed separately).
